Challenge	Solution & Outcome
 Clip is a leading Mexican fintech company specializing in digital payments and commerce platforms. As Mexico's first "payments unicorn," Clip enables businesses of all sizes to accept digital payments, driving financial inclusion in a market where 38% of adults remain unbanked yet most own mobile phones. Clip serves hundreds of thousands of businesses, many new to financial services, generating frequent inquiries about fees, account setup, payment options, and credit lines. Managing thousands of new customers each month without a traditional banking infrastructure required a scalable, accurate, and fast support solution. Luis Aceves, Lead Consultant Partner	Since 2022, NeuralSeek has powered Clip's advanced AI virtual assistant using retrieval-augmented generation (RAG) technology. The assistant identifies customer intent, retrieves real-time data from external databases, and delivers context-rich answers instantly. One of the solution's standout features is its seamless integration with Salesforce Cloud, allowing the chatbot to access and leverage CRM data for enhanced functionality. This integration enables the assistant to generate leads, create level 2 support cases, validate user identities, and retrieve other relevant information; streamlining operations and elevating the user experience. Leveraging NLP, the assistant can recognize when customers reference available products and, if a request is vague, guide them with targeted suggestions until the most accurate answer is delivered. • 6,000+ simultaneous interactions handled • 66%+ of inquiries resolved autonomously with generative AI • 80% faster interactions vs. call centers • 28% annual growth in chatbot usage The solution delivers a 24/7 omnichannel experience, frees agents for complex cases, and accelerates financial inclusion for thousands of entrepreneurs across Mexico.  Snap Inc. is a global technology company that empowers people to express themselves, live in the moment, and learn about the world. With a distributed workforce spanning multiple regions, Snap required a centralized, instant-access solution to streamline HR information delivery, reduce support overhead, and improve the employee experience. Finding accurate HR information at Snap was time-consuming, with scattered resources and delays in responses from support teams. Managers and employees struggled to quickly access details on People programs, policies, and processes, leading to inefficiencies and reduced productivity. Support staff spent disproportionate time on repetitive inquiries instead of higher-value initiatives. Wendy Brock, Director of Product, People Tech at Snap	NeuralSeek powers "Chilla," Snap's internal Slack bot that acts as a secure, AI-driven HR assistant. Using Slack as the front-end and NeuralSeek as the back-end, Chilla functions as a ChatGPT-like experience with strict AI guardrails to ensure compliance with internal policy standards. The assistant integrates with multiple knowledge sources, including Snappy pages and pre-defined Q&A datasets, with contextual awareness by country and city. It supports advanced workflows such as: • Providing instant HR and policy information • Nudging managers to approve time off requests and complete onboarding tasks • Reminding managers about direct report milestones (birthdays, anniversaries) • Surfacing new hire checklists • Accessing Workday data to provide team member information • Generating prompts for council meetings • Creating Zendesk tickets for escalations • Capturing feedback to continuously improve responses NeuralSeek has become Snap's single source of truth for HR knowledge, ensuring consistent policy adherence and delivering an always-on, compliant, and context-aware HR support experience. (Public Cloud) • Reduced HR response times from hours to seconds • Improved employee satisfaction with immediate, accurate answers • Significant reduction in repetitive support queries, freeing HR teams • Global scalability with instant availability to employees via Slack

 Adobe continually innovates to enhance productivity, streamline workflows, and maintain governance standards across its global operations. Adobe's HR teams were spending significant time managing high-volume inbox traffic, fielding repetitive questions, and manually routing inquiries to the appropriate teams. Additionally, knowledge scattered across emails, messages, and documents slowed project momentum and made it difficult for employees to quickly find critical information. The company needed a scalable, governance-driven AI solution to automate repetitive tasks while ensuring compliance and maintaining control. <i>Shawn Ngoh, Sr RPA Developer, Finance Systems, 469.216.5314</i>	Adobe deployed NeuralSeek to power automated HR inbox triage, instantly answering common queries and routing complex cases to the correct HR team. NeuralSeek's unified knowledge access capabilities connect emails, messages, and documents, enabling rapid retrieval of relevant information without manual search. Built-in permissions, audit tracking, and AI guardrails ensure all outputs meet Adobe's governance standards. • Reduced HR workload through automated triage of common inquiries • Accelerated information retrieval and project momentum across departments • Governance, compliance, and trust through built-in guardrails and audit logs • Enabled scalable AI innovation by combining business-user autonomy with IT oversight in a Center of Excellence model Following the success of these initial deployments, Adobe is expanding NeuralSeek as the backbone of a Center of Excellence for Agentic AI, empowering business users to create AI Agents in a true no-code environment, while IT governs the process via a hub-and-spoke model.  As a publicly traded company, Verizon regularly engages with shareholders, analysts, and the media, particularly around earnings announcements and corporate updates. Earnings calls and investor Q&A sessions are high-stakes events where executives must respond quickly and confidently to challenging questions. Anticipating these questions and preparing precise, data-backed responses is a time-intensive process, often requiring coordination across finance, investor relations, and corporate communications teams. Delays or incomplete preparation can lead to missed messaging opportunities or inconsistent information delivery. <i>Pradeep Chettipalli, Senior Principal Engineer, 848.205.6230</i>	Verizon deployed NeuralSeek AI Agents to automate the process of anticipating, refining, and preparing responses for shareholder and analyst questions. The system proactively reviews upcoming earnings reports, press releases, and internal briefing materials to forecast likely questions. It then cross-references these with historical Q&A archives, call transcripts, and investor behavior patterns to refine predictions. Finally, NeuralSeek generates context-rich draft responses, complete with relevant financial metrics, operational data, and market context, ready for executive review and delivery. • Improved readiness for high-pressure investor/media interactions • Increased accuracy of responses by grounding via verifiable data • Reduced preparation time for earnings calls and other disclosures NeuralSeek has become a Foundation for strategic expansion, as Verizon is now leveraging NeuralSeek for extensive enterprise-wide search powered by Agentic AI, enabling employees across the organization to find and act on critical information faster and more intelligently.  AdMed, Inc., a U.S.-based company, specializes in developing medical education and training materials for the pharmaceutical and biotech sectors. Their content is created by highly skilled medical professionals to ensure accuracy, credibility, and impact. Creating high-quality medical training content is a labor-intensive process that requires significant subject-matter expertise and time investment. AdMed needed a way to streamline production without compromising the accuracy or depth of its materials, while also easing the workload for the doctors and medical experts involved. <i>William Francy, President Client Services, 215.862.2316</i>	By integrating NeuralSeek's no-code AI orchestration platform into its workflow, AdMed accelerates content creation and enhances the quality of its training materials. NeuralSeek assists in research, drafting, and knowledge retrieval, allowing medical professionals to focus on higher-value tasks while maintaining strict accuracy and compliance standards. By leveraging NeuralSeek, AdMed has reduced content creation time, enabling faster delivery to clients, while increasing productivity for medical professionals by automating repetitive tasks. The platform has also enhanced the quality and consistency of educational materials, ultimately strengthening AdMed's competitive advantage through innovative AI-enabled workflows. (Public Cloud)

NatWest Group is one of the UK's largest retail and commercial banks, serving millions of customers across personal, business, and corporate banking segments. As part of its ongoing digital transformation, NatWest launched a 12-week pilot for a next-generation digital assistant, "Cora+," leveraging NeuralSeek's Retrieval-Augmented Generation (RAG) capabilities to enhance customer service through secure, responsible AI.

NatWest's existing virtual assistant, Cora, could already address over 150 day-to-day banking queries. However, to meet rising customer expectations for conversational, context-aware assistance, NatWest sought to incorporate generative AI in a way that complied with strict EU GDPR and banking regulations. The challenge was to ensure accuracy, governance, and accountability in every AI-generated response for a public-facing, high-volume support channel.

Cora+ integrates ChatGPT 3.5 Turbo as the conversational engine, with NeuralSeek's RAG orchestration layer delivering verified, knowledge-grounded answers. NeuralSeek's AI Guardrails ensure that every customer-facing response aligns with compliance requirements and NatWest's internal policies. The NeuralSeek features leveraged in this solution are:

- Granular Governance Controls – rules for banking-specific queries
- Audit Logs – complete traceability of each AI interaction for compliance
- Replay Functionality – enables post-interaction review of AI workflows
- KnowledgeBase Integration – responses are sourced approved content
- Multi-Channel Support – available on website, mobile app, and online

NatWest's Cora+ pilot has delivered responsible AI deployment in a GDPR-regulated environment, increasing accuracy and trust through grounded, verifiable responses. The solution has enhanced customer self-service across web, mobile, and online banking channels, while improving operational efficiency by reducing the workload on live agents handling common banking queries. With a future-ready governance framework in place, NatWest is well-positioned to scale AI capabilities across additional banking services. *(Private Cloud)*

Penn State University, ranked among the top six percent of universities worldwide, serves nearly 90,000 students across multiple campuses. Known for its academic excellence, robust research programs, and commitment to student success, Penn State continually invests in innovative solutions that enhance the campus experience and foster a strong sense of community.

Student leaders and internal analyses revealed a pressing need for a more efficient, personalized way to connect students with university resources. The existing channels for academic, health, wellness, and financial aid support often required navigating multiple systems, leading to delays and inconsistent experiences. Penn State sought a solution that could unify access to services, deliver fast and accurate guidance, and scale across its diverse student population.

Penn State partnered with NeuralSeek to create MyResource, a generative AI-powered digital concierge designed to streamline student access to campus services. Leveraging NeuralSeek's no-code orchestration platform, the university integrated conversational AI, retrieval-augmented generation, and enterprise-grade guardrails. MyResource is trained on Penn State-provided data, enabling precise, context-aware responses while ensuring compliance through built-in governance features like harmful language filtering and sensitive data detection.

- Centralized, personalized access to academic, health, wellness, and financial aid resources
- Faster, more accurate student support, reducing friction and improving satisfaction
- Scalable AI platform capable of serving nearly 90,000 students

"At Penn State, student success is our priority, and this is an exciting step toward continuing to enhance the lives and experiences of students across our University, leveraging advancements like generative AI, a critical tool to help us create a more student-centered experience, remove barriers, improve retention rates and further achieve a sense of belonging for all Penn Staters by allowing our students to navigate our institution seamlessly and intuitively." - Penn State President Neeli Bendapudi *(Private Cloud)*

Banco de la República Oriental del Uruguay (BROU) is the largest and oldest bank in Uruguay, serving over one million clients across retail, commercial, and corporate banking. With a vast branch network and diverse service portfolio, BROU plays a central role in the country's financial infrastructure.

BROU sought to modernize its internal support systems to improve knowledge access for employees and streamline process documentation management. The bank needed a solution capable of providing fast, accurate, and context-aware answers to internal queries, with the scalability to eventually extend AI-powered services directly to its customer base.

BROU implemented NeuralSeek to power its internal chatbot and process documentation search, enabling employees to retrieve verified information instantly. NeuralSeek's no-code interface allows BROU to adapt and expand the system quickly, while its built-in governance, guardrails, and audit logging ensure compliance with the bank's security and operational standards. The platform is designed to integrate seamlessly with future customer-facing channels, supporting the bank's roadmap for AI-driven service expansion.

- Accelerated employee access to critical process and policy information
- Improved internal operational efficiency and knowledge sharing
- Established a secure, governed AI foundation for future client initiatives
- Positioned the bank to scale AI services to over one million customers

(On-Prem)

AFP Capital, a Chilean pension fund administrator owned by the Colombian financial group SURA, serves millions of clients across the country. The organization is responsible for managing retirement savings, providing financial guidance, and ensuring timely, accurate communication with both customers and internal teams.

AFP Capital needed a way to deliver consistent, high-quality responses across multiple customer and employee interaction channels, including IVR, WhatsApp, the company's main website, and internal support platforms. Fragmented knowledge sources and manual response processes risked slowing service times, creating inconsistencies, and placing additional strain on customer service teams.

AFP Capital implemented NeuralSeek as a unified AI-powered response engine, integrating it into IVR systems, WhatsApp, the corporate website, and internal platforms. NeuralSeek delivers fast, accurate, and policy-compliant answers, drawing from verified knowledge sources to ensure consistency. The platform's multi-channel deployment ensures both clients and employees receive the same high-quality information, regardless of the channel used, while built-in guardrails maintain compliance with regulatory requirements.

- Delivered consistent, accurate information across all customer and employee touchpoints
- Improved response times and customer satisfaction through automation
- Reduced workload on support teams by deflecting routine inquiries
- Ensured compliance with regulatory standards via NeuralSeek's governance and guardrails
